

APPLICATION

The Det-Tronics line of electrochemical gas sensors is designed to provide continuous monitoring of the atmosphere for potentially hazardous gas leaks or oxygen depletion. Models are available for detecting a variety of gas types in various concentration ranges. Transmitter circuitry contained within the sensor housing generates a 4 to 20 ma output signal that is proportional to the concentration of the target gas. These sensors are compatible with R8471 Series Gas Controllers, Infiniti Transmitters, Eagle Digital Communication Units (DCUs), or any other monitoring devices that have the ability to monitor a 4 to 20 ma dc input and provide calibration capabilities. Sensors are designed for use in hazardous environments and are furnished as either explosion-proof or intrinsically safe devices.

FEATURES

- Electrochemical sensor cell for increased accuracy, stability and reliability.
- Highly specific response reduces the chance of false alarms resulting from the presence of other gases.
- Self-contained transmitter circuitry.
- Temperature compensated to ensure consistent performance over entire operating temperature range.
- Easily replaceable hydrophobic filter provides additional protection for the sensing element and enables operation in wet environments.
- Quick, easy field replacement of sensor cell and hydrophobic filter.
- EMI/RFI hardened.
- FM, CSA and CENELEC models available.

DESCRIPTION

The electrochemical sensor consists of a field replaceable sensor cell, mounted inside a sensor housing that also contains the transmitter circuitry for generating the 4 to 20 ma output. See Figure 1 for sensor dimensions.

SENSOR CELL

The electrochemical sensor cell uses capillary diffusion barrier technology for monitoring gas concentrations in

ambient air. When compared to solid state type sensors, the electrochemical sensing element provides improved accuracy, stability and reliability, and can also extend calibration intervals. This results in superior performance and reliability, as well as reduced maintenance.

OUTPUT

The sensor output is a 4 to 20 ma signal that is generated by transmitter circuitry contained within the sensor housing. The sensor output directly corresponds to 0 to 100 % full scale (full operating range).

SENSOR RATINGS

Depending on model, the sensor is furnished as either an explosion-proof or intrinsically safe device.

Explosion-proof sensors are designed for use in Class I, Division 1, Groups C and D and EEx d IIB plus hydrogen T6 hazardous locations.

Intrinsically safe sensors are designed for use in Class I, Division 1, Groups A, B, C, and D and EEx ia IIC T6 hazardous locations. (Intrinsically safe sensors must be powered through an approved I.S. barrier.)

SENSOR WIRING

Three wire cable (power, signal and ground) is used for connecting the sensor to its associated transmitter, controller or monitoring device. The use of shielded cable is highly recommended. See Figure 2.

Electrochemical Gas Sensors - Model Comparison

Model	C7064C	C7064E	C7065E	C7066E
Gas	Hydrogen Sulfide (H ₂ S)	Hydrogen Sulfide (H ₂ S)	Oxygen (O ₂)	Carbon Monoxide (CO)
Type¹	IS ²	EP	EP	EP
Range	0 to 100 PPM	0 to 100 PPM	0 to 25%	0 to 100 PPM 0 to 500 PPM 0 to 1000 PPM
Response Time³	T20 in 12 seconds T50 in 30 seconds	T20 in 12 seconds T50 in 30 seconds	T20 in 4 seconds T50 in 9 seconds	T20 in 18 seconds T50 in 30 seconds
Accuracy	±10% or ±3 PPM, whichever is greater	±10% or ±3 PPM, whichever is greater	±5% of O ₂ conc. or ±0.5%, whichever is greater	±10% or ±3 PPM, whichever is greater
Zero Stability	< 1 PPM / Mo.	< 1 PPM / Mo.	< 1 PPM / Mo.	< 1 PPM / Mo.
Span Stability	< 1% FS / Mo.	< 1% FS / Mo.	< 1% FS / Mo.	< 1% FS / Mo.
Temperature Range	−40°F to +122°F −40°C to +50°C	−40°F to +122°F −40°C to +50°C	−4°F to +122°F −20°C to +50°C	−4°F to +122°F −20°C to +50°C
Recommended Storage Temperature	+32°F to +68°F 0 to +20°C	+32°F to +68°F 0 to +20°C	+32°F to +68°F 0 to +20°C	+32°F to +68°F 0 to +20°C
Humidity Range	15 to 90% RH	15 to 90% RH	0 to 99% RH	15 to 90% RH
Pressure Range	Atmospheric ±10%	Atmospheric ±10%	Atmospheric ±10%	Atmospheric ±10%
Enclosure Material	Stainless Steel	Stainless Steel	Aluminum	Aluminum
Certifications⁴	FM ² CSA ² CENELEC ²	FM CSA CENELEC	CSA	CSA
Voltage Requirements	(Across sensor) 12 to 32 vdc, 24 vdc nominal			
Power Requirements	(At full scale output) 0.25 to 0.8 watt, 0.5 watt nominal			
Maximum Loop Resistance	300 ohms at 18 vdc, 600 ohms at 24 vdc, 1000 ohms at 32 vdc			

¹ IS = Intrinsically Safe, EP = Explosion Proof

Intrinsically Safe sensors are designed to meet FM and CSA intrinsic safety requirements for Class I, Division 1, Groups A, B, C, and D; and CENELEC EEx ia IIC T6.

Explosion Proof sensors are designed to meet FM and CSA requirements for Class I, Division 1, Groups C and D and CENELEC EEx d IIB plus hydrogen T6.

² In order to maintain the intrinsically safe rating of the sensor, the device must be powered through an approved I.S. barrier.

³ Time to reach percentage of final reading when gas concentration equal to full scale is applied to sensor.

⁴ Always ensure sensor hazardous (classified) location rating is applicable for the intended use.

ORDERING INFORMATION

Sensor cells and sensor housings must be ordered separately. When multiple gas ranges are available, order matching sensor cells and housings.

SENSOR HOUSINGS

Specify:

C7064C Intrinsically Safe H₂S Sensor Housing
 C7064E Explosion-proof H₂S Sensor Housing
 C7065E Explosion-proof O₂ Sensor Housing
 C7066E Explosion-proof CO Sensor Housing
 Specify: 0 to 100, 0 to 500, or 0 to 1000 ppm
 C7067E Intrinsically Safe Cl₂ Sensor Housing
 C7068E Explosion-proof SO₂ Sensor Housing
 C7069E Explosion-proof NO₂ Sensor Housing

Specify 3/4 inch NPT or 20 mm threads.

SENSOR CELLS

Specify type of gas to be detected and operating range (where applicable).

ACCESSORIES

Explosion-proof aluminum sensor junction box with connectors.
 Specify 3/4 inch NPT or 20 mm conduit entries to match sensor housing threads.

Calibration Equipment

Calibration Kits include regulator, hose, calibration cup, and two cylinders of calibration gas in carrying case.

H₂S Calibration Kit — 50 ppm
 O₂ Calibration Kit — clean air (20.9% oxygen)
 CO Calibration Kit — Specify 50, 250, or 500 ppm.
 Cl₂ Calibration Kit — 5 ppm
 SO₂ Calibration Kit — 50 ppm
 NO₂ Calibration Kit — 10 ppm

Sensor Separation Kit

Allows the transmitter to be mounted remotely from the sensor to enable remote calibration or to provide more convenient viewing of the transmitter display.

Remote Calibration Cup

Designed for permanent connection to the sensor. Enables one man remote calibration in applications using a sensor separation kit.

Rain Shield

Protects the sensor from rain and snow. Accepts stainless steel and porex dust covers.

Dust Covers

Protects sensors against dust, oil or high wind conditions. Stainless steel or Porex. Can not be used if hydrophobic filter is used.

Duct Mount Assembly

Allows the sensor to be mounted on a heating or air conditioning duct or flue.

Q81X Duct Mount Enclosure Assembly

Draws a sample across a high velocity duct, resulting in a more representative sample.
